

# **SPURO<sup>®</sup>** *Heavy Duty Bubble Wrap*

## **PROTECTIVE LDPE FOIL FOR DEMANDING APPLICATIONS**

### **Maximum surface protection for heavy and bulky products**

Extremely durable low-density polyethylene (LDPE) film with enhanced durability thanks to special additives and a specially designed bubble shape. The specific patented bubble shape with the same thickness in every place guarantees excellent mechanical resistance. The material used ensures protection of surfaces prone to scratches. The increased area between the bubbles allows ultra-strong welding of the film, which therefore has high compressive strength. The large air volume per m<sup>2</sup> of the film gives excellent energy absorption capacity upon impact, and the film also has good thermal insulation properties.

- | highly durable film for demanding applications, industrial packaging and transportation or storage of bulky and heavy objects
- | withstands extreme loads without bursting bubbles and ensures energy absorption upon impact
- | produced in thicknesses from 400 microns
- | possibility of anti-corrosion properties by adding additives
- | can be produced from recycled materials
- | can be laminated with other materials, such as aluminum, paper, PE foil
- | reusable, 100% recyclable

## | TECHNICAL SPECIFICATIONS

Width [mm]*	Core, inside diameter [mm]*	Thickness [my]*	Foil type*
up to 2500	76	from 400	heavy-duty

## | COLOUR

Dark blue

Light blue

Grey (recycled)

## | DESIGN

print on demand

\*other options including recycled content or lamination can be agreed upon request
